PROJECTS

Weather(Live)

- A weather forecast website build by js, react and tailwind frameworks
- It has hourly-daily forecast, humidity, wind speed, sunrise and sunset information
- It has gps search option and also people can search the city
- Fetched the data from OpenWeatherMap API
- Update the time by luxon library
- Also used react toastify
- Source Code: https://github.com/Syed997/forecast.git

Banking System (Live)

- The website build by HTML, CSS, Tailwind, JS
- A website where people can log in and withdraw or deposit their money
- The application has a total of two screens. Log in page and dashboard page. The dashboard page has a deposit bar, withdraw bar and total balance bar
- There are two input options for the users to give the amount of withdrawal and deposit money
- The page also contains a logout button
- Source Code: https://github.com/Syed997/Banking-System.git

Calculator (Live)

- The website build by HTML, CSS, Js
- A website-based calculator where people can do mathematical calculations
- It's able to do simple arithmetic, which includes addition, subtraction, multiplication, and division
- Source Code: https://github.com/Syed997/calculator.git

Food Order App

- An android application in JAVA where people can order food
- The application has total of three screens. Starting page, home page, and cart list page
- In this app, people can see the offers, search the food and add them to the cart
- There will be a pop-up message after adding the food to the cart
- Source Code: https://github.com/Syed997/foodorder_app.git
